

Waste handling system	Ok	Problem	Irrelevant
Is the pre-storage tank covered by a durable material?			
Is the edge of the slurry tank sufficiently high above the ground?			
Is something standing or lying up against the tank?			
Is there a water seal between the pre-storage tank and the stable?			
Have the employees been instructed in the operation of the slurry system?			
Has there been any instruction in the influence which dangerous slurry gas has on animals and humans?			
Have there ever been animals or humans that have fainted because of slurry gas?			
Is there a nook or a department where you know that the risk of slurry gas is bigger?			
Do you have a plan for what to do if you enter the stable and discover that the animals have fallen over because of slurry gas?			
Have the employees been instructed of what to do if a colleague has fallen over because of slurry gas?			
Does excretion of slurry take place at hours, where nobody is in the stable?			
Do you wash out with slurry that is well stirred or water?			
Do you yourselves enter the slurry tank / pre-storage tank at possible repairs or inspections?			
Do you use fresh air supply, safety belt, rope, hoist and additional assistants, if you enter the pump well and slurry tank?			
Do you check the hoses and couplings of the outside system?			
Is the toilet in the stable connected to the slurry system?			
Are there visible signs on slurry tanks and pre-storage tanks warning of dangerous slurry gas?			
Wire rope drive	Ok	Problem	Irrelevant
Is there an emergency stop device?			
Are there shields and grilles to catch the calves?			
Does the wire rope drive automatically stop if it is loaded with a person's weight?			
Are all shields placed both on the inner and the outside of the drive units?			
Are the channels sheltered?			
Is there a risk that children might unintentionally get close to the wire rope drive and the slurry channel in the stable?			
Do you check the wire ropes and the drive units?			
Scraber robot	Ok	Problem	Irrelevant
Does the robot change direction when it encounters humans or animals?			
Is there a sign at the entrance to the stable informing that there is a scraber robot in the stable?			
Are the shields on the robot and the battery charging depot placed in such a way that you cannot get anything stuck?			
Mini loader	Ok	Problem	Irrelevant

Are the employees trained in the use of the mini loader?			
Do you use ear protection when you are driving the mini loader?			
Mucking-out equipment / tethered stalling	Ok	Problem	Irrelevant
Is there an emergency stop device in the stable?			
Is there an emergency stop device outside?			
Is it necessary to stay in the stable while the waste handling system is running?			
Are all channels sheltered - outside and in the stable walking areas?			
Do you check wire ropes, chains and drive units?			
Manual scraping	Ok	Problem	Irrelevant
Has the necessary instruction in heavy lifting and ergonomics been given?			
Can additional measures be made, so that there will be as little manual mucking as possible?			
Is it very heavy what has to be scraped?			
Do you have to stand in poor working positions while performing your task?			
Various	Ok	Problem	Irrelevant
