

Noise	Ok	Problem	Irrelevant
Do you use ear protection during feeding?			
Do all employees use ear protection when it is necessary?			
Dust	Ok	Problem	Irrelevant
Do you mix fat, oil and the like with the feed to reduce the dust?			
Do you use breathing masks when you are in connection with the dust from the feed?			
Are all the joints on the feeding plant dust proof?			
Are the filters on the grinder / mixing plant self-cleaning?			
Is there water in the trough when the dry feed is applied?			
Are you planning at reducing the presence of dust in the piggery?			
Are the dust masks in close proximity to where they should be used?			
Safety	Ok	Problem	Irrelevant
Are all safety guards in place, so that nothing can get stuck?			
Do you make sure that the shields are mounted after the repair?			
Are rotating / working parts shielded properly?			
Do shields and doors break down under normal use?			
Repair / cleaning	Ok	Problem	Irrelevant
Is it possible to padlock the main switch?			
Has the repairer received the necessary instruction?			
Are all employees informed when the feeding plant is being repaired so that none will start it?			
Is the feeding plant CE-marked?			
Accidents and absenteeism	Ok	Problem	Irrelevant
Have you experienced near misses in connection with mixing of feed or feeding?			
Is it necessary to operate, clean or repair the feeding system up in the height?			
Do you use the necessary safety measures?			
Does the work with the feeding cause absence?			
Ergonomics	Ok	Problem	Irrelevant
Do any employees suffer from sore arms, neck, shoulders, back and knees?			
Are there manual tasks that could be mechanised to minimise wear on the body?			
Is there heavy lifting associated with feeding or mixing feed?			
Is there any lifting in stressful postures, for example far from the body, above shoulder height and below knee-high?			
Is there an alternative to loads above 11 kg, for example bags with less content?			

Is the handle for the feed release mechanism placed appropriately?			
Do you maintain the handles so that they are easy to operate?			
Do you have a bucket with a handle to empty the trough?			
Are there any facilities available and are they the proper ones for the tasks?			
Do the employees need to put a lot of effort in pulling or pushing the facilities?			
Are the hand pushed facilities maintained, so they are easily pushed or pulled?			
Is it cramped with room at pushing and pulling of e.g. feed carts?			
Are employees working with bended or twisted neck or back?			
Gestation stable	Ok	Problem	Irrelevant
Have the employees been thoroughly instructed in the animals' behaviour when they are fed?			
Are you two persons present during feeding and other tasks?			
Traffic	Ok	Problem	Irrelevant
Are the corridors smooth where you work with feed?			
Are there cracks or holes in the ground that can cause you to fall over with for example the feed trolley?			
Is it messy because of waste, tools or materials which can make you fall?			
Are there narrow passages, slopes / rises, where the feed is transported around the stables?			
Various	Ok	Problem	Irrelevant
